

# A Pioneering Business in Energy and Infrastructure Ventures

Edgo Energy Services Center, Basra

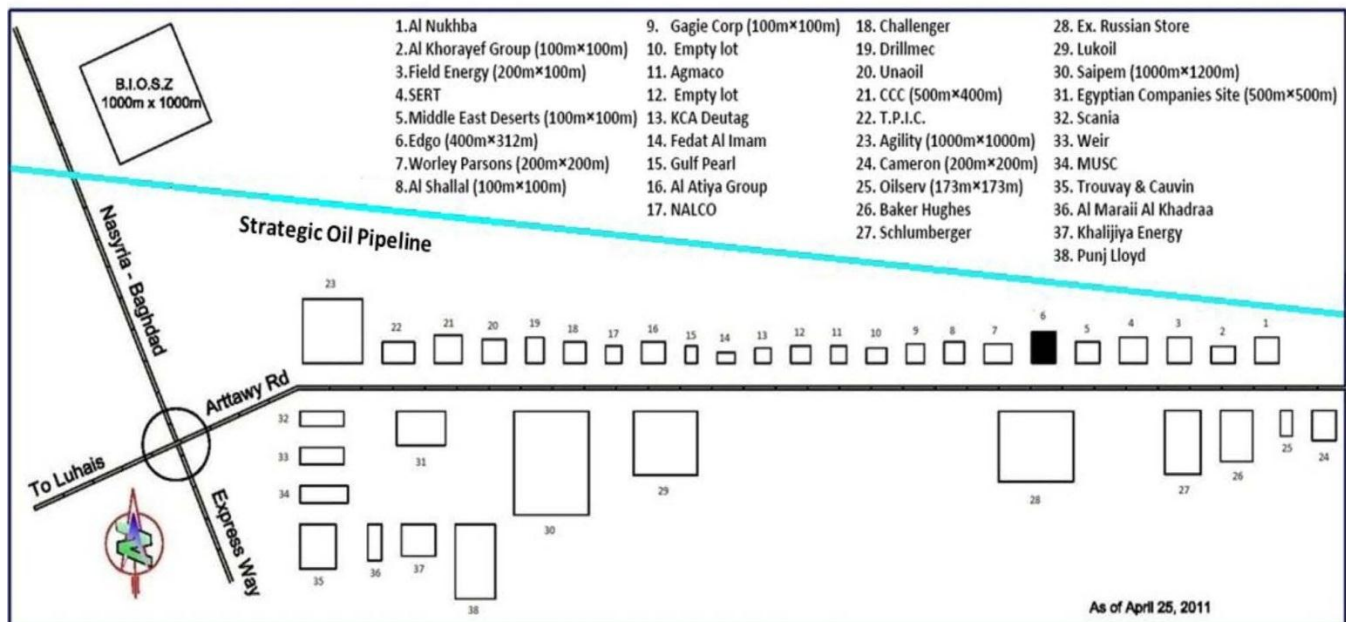

In response to Iraq's expanding energy sector, Edgo has established a comprehensive Energy Services Center (ESC) near Basra. The land covers 125,000m<sup>2</sup> in the North Rumaila area. Having secured the area and brought all utilities to the site, Edgo has constructed a camp with office and accommodation facilities, workshops, storage yards as well as training facilities (classroom & workshops), a recreation facility (gym, TV rooms, etc.), convenience store, barber shop and clinic. Security will be an integral part of the operation. The facilities will be wrapped in a tastefully designed and functional environment, landscaped using native materials, and arranged to minimize vehicle and pedestrian conflict. Edgo has successfully created in Basra a safe, self-contained working environment for both oil companies and oilfield service providers and their subcontractors.

The ESC is an essential component in Edgo's strategy to better serve the oil, gas and power sectors and reinforces its long standing commitment to Iraq's future. It is a strategic addition to the ESC oilfield services supply bases owned and operated by Edgo in the Middle East and Africa. With the recent influx of the oil majors into Iraq, Edgo looks forward to providing services to its clients and is delighted to have the support of the South Oil Company.

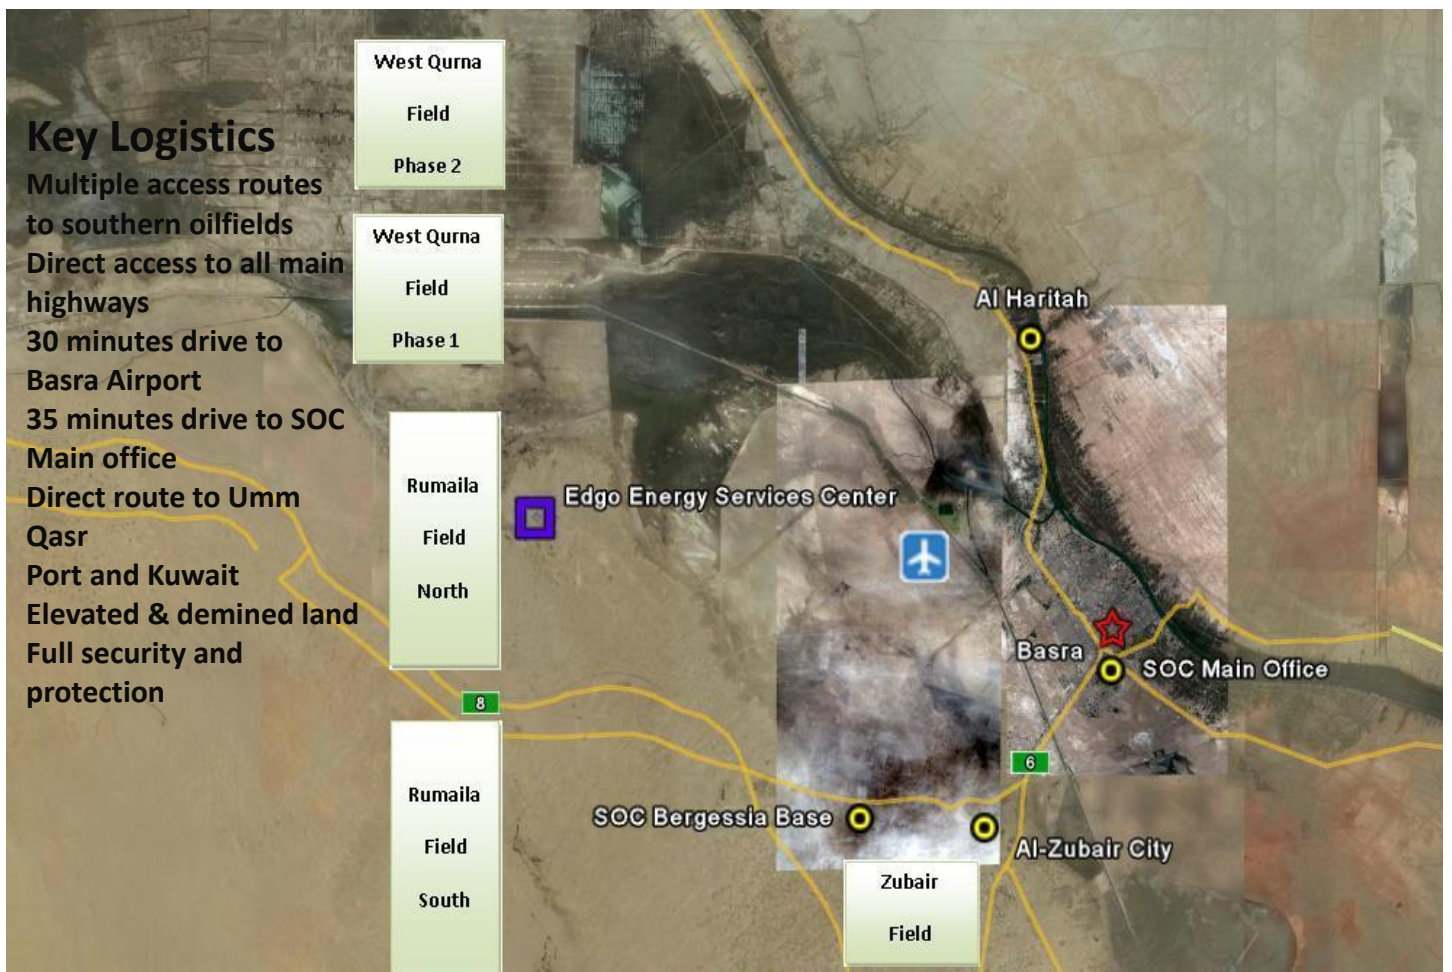

# Locality

Edgo has secured a prime location in the heart of North Rumaila alongside some of its international partners and peers such as Schlumberger, Saipem and Baker Hughes. The local transport network is excellent and there is simple access to the main arteries leading to the major oil & gas fields, as well as the key cities across Southern Iraq.

# Location

The Edgo ESC is approximately 40km from Basra City and 25km from Basra International Airport. It is strategically placed to serve the Rumaila fields and equally well situated to cover the West Qurna and Zubair fields with direct routes to the ports and Kuwait.

# Facilities

Edgo can provide a full 'Life Support' package at its camp which is inclusive of catering, housekeeping and cleaning, support services such as laundry, high speed internet access and dedicated camp security, operated by a well-regarded international security firm. Facilities include a fully-equipped gym, dining room, and various recreation areas. The storage depot offers covered storage, stocking facility and areas for silos and bulk materials.

Janitorial and general housekeeping services are provided seven days a week in all buildings, offices, and general facilities within the camp, including outside camp areas, recreation areas, personnel accommodation, grounds keeping and parking areas. Offices are cleaned and maintained on a daily basis, and special attention is given to medical, food storage, and laundry/ironing facilities. Maintenance support for AC, hot & hold water, etc. is provided around the clock.

# Life support

Edgo has considerable experience in developing similar facilities in the Middle East and North Africa

- Fully catered (western & eastern menus)
- Field lunches w/ ice packs & food warmers
- Dual accommodation levels
- Business facilities
- Clinic professionally-equipped w/ resident doctor
- Barber shop
- Recreation area w/ ping pong and pool tables
- Gym (latest Cybex brands of exercise bikes, treadmills, cross trainers, multi-gym, and free weights)
- Convenience store w/ a wide variety of items
- Mosque
- Laundry

A typical accommodation unit would include:

- Dimensions of 4m x 3m
- Single size bed
- Night stand
- Wardrobe
- Desk + chair
- TV set + DVD
- Mini refrigerator
- A/C split unit, 18,000 BTU, 1.5T
- Waste baskets and floor mat
- Bathroom with toilet, sink, shower/curtain
- Utilities including hot and cold water, electricity, high speed wireless internet, sewage

# Training

Edgo is building a sizeable training campus which will encompass a multi-discipline training facility, living quarters, and dining facilities along with other planned amenities at the ESC. The Basra region lacks affordable training facilities that could provide the in-depth, hands-on training desperately needed across Iraq. In the last 20 years, the oil and gas industry has acknowledged that accidents are preventable, and that safety is a value as well as a competitive edge. Oil and gas companies are engaged in exploration projects in some inhospitable regions of the country requiring the highest standards of safety and technical skills. Edgo wants to address these areas of safety and skills enhancement to provide world-class training, in a world-class facility.

The ESC provides a safe location for international companies to setup, whilst sharing the setup costs of partner companies, lowering the barriers of entry into a new territory, and accelerating penetration into the Iraqi market.
